It works with most GPS devices, and it even has a built-in GIS for plotting and editing. As an added bonus, CompuGPS LAND has a "zero" memory footprint and works on any computer system you want. One of the best free GIS programs around. Tip:

CompuGPS is available in two editions. If you're an Apple user, you can get the full version and the free copy of the GPS Viewer. If you use Linux or another PC, you can get the free version and the full version of CompuGPS. Note: The CompuGPS program works with a lot of GPS devices, but some of the newer models have trouble communicating with it. If you can't get it

to work with your device, try a different app, like The GPG-800. See Also: GPSWorks Lite GPS Viewer GPS Viewer (Free/Paid) The GPS Viewer works with most GPS devices and is available for any type of PC. There are different editions, each of which is priced differently. But all of them offer the same basic functionality. Tip: If you're just starting out, the GPS

Viewer is probably the most intuitive GIS for GPS devices. If you can get used to it, you'll find you can do all kinds of geospatial tasks with it. GPS Finder GPS Finder (Free/Paid) The GPS Finder is available for Windows and Mac and is probably the most popular utility for viewing and plotting GPS tracks. It's also one of the most widely used GIS programs because of the

ease of use. Tip: If you want a popular GIS program that's free, the GPS Finder is the way to go. See Also: mTrack TopGPS The TopGPS is a PC-based software system that works with most GPS devices. You can download the free version onto your PC and use it without any type of internet access. Tip: If you're tired of paying for software, try the free version of TopGPS.

How to calculate distances on topographic maps Looking at maps of an area, it can be challenging to figure out how far away something is. For example, I can look at a 82157476af
